

A new startup company is looking for a motivated engineer as a partner to work together (part time) on a project that has two utility patents already granted by US Patent and Trademark Office. Their prototype system generates a great interest to a Massachusetts Fortune 100 company.

The requirements:

Senior System Admin of Linux, Windows, and VMware with extensive experience in a wide range enterprise sever hardware;  
OS & application software management;  
kernel re-configure;  
SAN;  
interprise storage (SAN-based);  
SAN-boot, iSCSI;  
bare-metal recovery;  
shell and/or perl proramming.
